Summary

A passionate and dedicated Full Stack Developer with hands-on experience building complete, production-ready web applications using the MERN stack and Next.js. Skilled in developing everything from secure authentication systems and real-time messaging to dynamic listings and user management platforms. Committed to writing clean, scalable code and delivering seamless user experiences from front to back.

Education

University of South Asia

2023 – 2027

Bachelor of Science in Computer Science - **CGPA - 3.56**

Lahore, Punjab

Coursework/Skills

- | | | | |
|----------------------------|-------------------------------|---------------------------|---------------------------------|
| • Programming Fundamentals | • Object-Oriented Programming | • Database Management | • Agile and Backend Development |
| • Data Structures | • Algorithm Analysis | • Artificial Intelligence | |
| | | • Web Development | |

Skills Summary

Languages: C++, JavaScript, Python, TypeScript

Frontend: React.js, Next.js, Redux Toolkit, HTML, CSS, Tailwind CSS, Bootstrap, Framer Motion

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication

Database: MongoDB, MySQL, PostgreSQL

Others: Numpy, Pandas, Matplotlib

Developer Tools: Vercel, Cloudinary, Stripe API, Socket.io, Git, Github, VS Code, Postman, Figma, Wordpress

Soft Skills: Fast Learner, Problem Solver, Strong Communication, Attention to Detail, Self-Motivated, Team Collaborator

Projects

JobNest | *React, Node.js, Express, MongoDB, TailwindCSS, Nodemailer, Multer, GSAP, Framer Motion*

- A smart dual-role job platform where a single user can seamlessly switch between being a job seeker and a job provider, making it a one-stop solution for the job market.
- Job seekers can craft a personalized proposal and attach their resume when applying, which gets delivered straight to the provider's inbox via email along with their name and contact details.
- Providers have full control over their listings — they can post new jobs, manage existing ones, delete them anytime, and even search for talented individuals and reach out to them directly through email.

Royal Estate | *React, Node.js, Express, MongoDB, TailwindCSS, Cloudinary, Nodemailer*

- A fully functional real estate platform that gives users the power to create, update, and delete property listings with ease, complete with image uploads to showcase their properties in the best light.
- A smart search page goes beyond just searching — it comes with advanced filters that help buyers narrow down properties based on their exact needs and preferences.
- Buyers can directly contact property owners via email right from the listing, and the whole platform is protected with a solid authentication system for a secure user experience.

Authify | *MongoDB, Express, React, Node.js, TailwindCSS, Nodemailer, JWT*

- A complete MERN-based authentication platform built to handle all essential auth operations including signup, login, and logout with a clean and smooth user flow.
- Features a fully working forgot password system where a one-time OTP is sent directly to the user's email, making account recovery quick, secure, and hassle-free.
- Sessions are managed using JWTs, keeping the authentication process stateless, efficient, and ready to scale for real-world applications.

CERTIFICATIONS

DevWeekends Fellowship

June 2025 – August 2025

Bronze Level

- Completed a 3-month remote fellowship focused on MERN stack development and Data Structures & Algorithms via LeetCode.
- Practiced problem-solving patterns including arrays, hashmaps, sliding window, and recursion through structured LeetCode sessions.

Hobbies

Chess, Cricket, Sketching
