Summary

Full-stack MERN developer with experience building production-style applications using React, Node.js, Express, MongoDB, JWT authentication, REST APIs, and cloud media/storage integrations. Built multiple deployed projects involving role-based flows, email automation, image uploads, maps, and real-time features.

Education

University of South Asia

Bachelor of Science in Computer Science - **CGPA - 3.56**

2023 – 2027

Lahore, Punjab

Skills Summary

Languages: C++, JavaScript (ES6+), Python, TypeScript

Frontend: React.js, Next.js, Context API, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap, Framer Motion

Backend: Node.js, Express.js, RESTful APIs, JWT Authentication, OAuth

Database: MongoDB, MySQL

Others: Numpy, Pandas, Matplotlib, Agile/Scrum, LangChain

Developer Tools: Vercel, Cloudinary, Git, Github, VS Code, Postman, Figma, Wordpress

Soft Skills: Ownership Mindset, Resilience Under Pressure, Strong Communication, Self-Directed Learning

Experience

Developer's Hub Corporation

June 2026 – July 2026

Full Stack Developer Intern

Remote

- Deployed a full-stack e-commerce platform over a 2-month internship at Developers Hub Corporation, incorporating JWT-based authentication, Cloudinary media handling, and a responsive TailwindCSS interface on the MERN stack.
- Delivered "Venture Link," a full-stack platform matching investors with entrepreneurs through preference-based filtering, leveraging MongoDB, Express.js, React, and Node.js.
- Collaborated with the development team to ship production-ready full-stack features, gaining hands-on exposure to REST API architecture, database schema planning, and end-to-end deployment.

Projects

JobNest | jobnest.com | React, Node.js, Express, MongoDB, TailwindCSS, Nodemailer, Multer, GSAP, Framer Motion

- Developed a dual-role job platform where users can be both seeker and provider under a single account, removing the need for 2 separate profiles.
- Used Multer for resume uploads and Nodemailer to deliver seeker's proposal and resume directly to the provider's email, trying to keep the response times under 24 hours.
- Added GSAP and Framer Motion transitions across 5+ pages, improving UI smoothness and session duration.

Royal Estate | royalestate.com | React, Node.js, Express, MongoDB, TailwindCSS, Cloudinary, Nodemailer

- Engineered a real estate platform where users can create, edit, and remove property listings with multi-image upload.
- Optimized MongoDB schemas using aggregation pipelines, indexing, and query tuning for fast listing retrieval at scale.
- Integrated Cloudinary for image management, allowing users to upload upto 6 images on their listings.
- Setup a fully responsive, mobile-first UI with dynamic search and filter, letting users narrow listings by 3 filters that are price, amenities, and property type in real time.

Kindred | kindred.com | React, Node.js, Express, MongoDB, TailwindCSS, Cloudinary, Socket.IO, Leaflet, JWT

- Designed a neighborhood exchange platform for lending, gifting, and sharing items nearby, with map-based exploration and radius filtering within 5km.
- Created a handoff flow where both parties confirm pickup details and verify exchange via a 4-digit code, removing friction from in-person meetups.
- Implemented a gamified trust score algorithm using handoffs, shared items, and ratings, driving 40% higher repeat engagement among top-rated users.
- Incorporated Leaflet maps for real-time location tracking and live item discovery across the platform.

Certifications

DevWeekends Fellowship

June 2025 – August 2025

- Completed a 3-month remote fellowship focused on MERN stack development and Data Structures & Algorithms via LeetCode.
- Built multiple full-stack projects during the fellowship, strengthening hands-on experience with the MERN stack, while solving 200+ problems on LeetCode to sharpen data structures and algorithms skills.
